Colour System: Colour Logic

Colour in design is powerful. It can enhance a brand, or it can cause damage. At The Leprosy Mission, we have a unique approach to using colour in design. We believe that there should be logic to the colours we use. This logic is based on the following principles:

1. ACCESSIBILITY & LEGIBILITY

Anyone who consumes any content produced by The Leprosy Mission should first and foremost be able to read it. Appropriate colour contrast is at the heart of our brand colours. We have carried out extensive research with our supporters to develop comfortable colour combinations. This has been particularly important around body copy for offline content.

Where online content has the Web Content and Accessibility Guidelines (WCAG), there is a lack of guidelines around printed content. It was, therefore, an essential step to include our supporter's feedback when finalising the use of colour for printed designs. This is particularly important when some of our supporters likely have a visual impairment.

2. COLOUR SHOULD NOT BE A BARRIER TO GOOD DESIGN

Whilst ensuring that colour contrasts are effective for ease of use is essential, we also believe that colour should not be a barrier to good design. We wanted to choose colours that give us flexibility in design to appeal to multiple audiences. We should be able to produce designs that enable us to connect to our existing and newer audiences.

3. REPRESENTATIVE OF THE PEOPLE AND PLACES THAT WE SERVE

The use of colour is a powerful tool in connecting readers with people affected by leprosy. We will use brand colours to represent the people and places we write about. This may call for a brighter, bolder approach. At other times, a more muted feel may be necessary. We will use colour to help paint a picture to the reader of the environment we are describing.

Outward context

As a result, our chosen colours allow us to have a great deal of flexibility. The tones are representative of earth tones through to sky tones whilst incorporating the core brand colour of TLM Blue. We also acknowledge that the use of colour may sometimes differ in online and offline contexts.

Finally, our approach may mean that certain products sometimes need a particular identity. For example, a Christmas appeal may need to navigate away from the palette slightly to deliver the aims of a specific appeal. We also acknowledge our brand is evolving, and we may need to make future changes to align with our core principles.

Colour System: Rules

Acting consistently with the use of colour is important to support the TLM brand and hence have set out the following rules:

Use for print and digital (codes & values)

PRINT

When producing a design with a final destination as a physically printed item always design within a CMYK standard using the CMYK values for colours used. Where the document will be in both print and digital environments, design for print first then create a secondary version and update the colours for digital.

Example colour choice - use code in bold (CMYK)

DIGITAL

The digital colour space (RGB) has a much wider gamut of colours than physical print (CMYK). As such refer to the RGB codes of the brand colours.

Note for designers: Where designing for digital consider if the design will be used in print also, as some of the additional colours you may choose to use will not translate to physical CMYK printing.

Example colour choice - use code in bold (RGB)

Use of colour hierarchy

For the majority of designs always seek to use one of the primary colours in the design layout. For example, within a letter design the TLM Blue should be used as the background for the footer. If you need to use additional colours look to use colours from within the primary palette first, followed by colours from the secondary palette. Please bear in mind that consistency and simplicity are foundational elements of the TLM visual identity so be sparing with use of colour in all designs. For larger design pieces, such as magazine design, consider using the tertiary palette to add contrast and visual interest in the design.

Supporting colours usage

The use of the following supporting colours in the TLM palette should only be used in illustrations, very specific design usage or campaign designs, please consult your design team for advice or to query intended usage.

Note for designers: Grey 1 & Grey 2 can be used for supplementary information in copy, such as page notes, references and captions.
